

Problem Statement and Empathy Map

Date	01 October 2026
Team ID	6ab22737f32d8c9d8b225a8a
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Problem Statement

Users who request services through manual or disconnected channels are not told whether their request was received, who is handling it, or when it will be completed. They repeat the same details, follow up many times, and lose trust in the service. The project aims to give users one platform to submit requests, receive acknowledgements, and track status until completion.

Empathy Map

The empathy map below shows our user from four perspectives (what they Say, Think, Do, and Feel) in relation to the problem the project addresses. It helps the team build a customer-centric solution.

SAYS "I submitted my request, but nobody told me if it was received." "Why do I have to explain the same problem again?" "Can someone tell me when the service will be completed?"	THINKS - Is my request lost or ignored? - Will the service be done on time? There should be one simple place to track everything.
DOES - Submits requests through calls, emails or forms. - Follows up repeatedly to check the status. - Repeats personal and request details each time.	FEELS - Frustrated by the lack of updates. Anxious about delays and missed requests. - Relieved and confident when status updates arrive.

ARUN KUMAR
(Service Requester)

Key Insight

The user's main need is visibility. Timely acknowledgements and status updates would turn frustration and anxiety into confidence.
