

Scalability & Future Plan

Date	01 October 2026
Team ID	6ab22737f32d8c9d8b225a8a
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Client Scripts and UI Policies are applied only to the Incident table.	Other tables (Problem, Change) still allow incomplete data entry.	Medium
2	Validation runs only on the client side in the browser.	Records created through API, import or integrations bypass the rules.	High
3	Rules and messages are hard-coded inside scripts.	Any change to a rule needs a script edit, which is slow and error-prone.	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Scripts run in each user's browser, so load on the server is low for a small team.	Keep scripts lightweight and avoid repeated server calls (use GlideAjax only when needed) so the form stays fast for many agents.
2	Data Storage	Incident records are stored in the standard Incident table with no extra custom tables.	Archive old resolved incidents and store rule settings in system properties or a config table.
3	Performance	A few onLoad/onChange scripts and UI Policies run on the Incident form.	Replace scripts with UI Policies wherever possible, and reduce onLoad scripts to shorten form load time.
4	Security	Validation is client side only, and field access depends on ACLs.	Add Business Rules and Data Policies as server-side checks, and use ACLs to protect sensitive fields.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Extend the same Client Scripts and UI Policies to Problem and Change forms.	Month 1–2	Consistent data quality across ITSM tables.
Phase 3	Add Data Policies and Business Rules to enforce the same checks on the server side.	Month 3–4	Rules apply to API and import records, not only the form.
Phase 4	Add a Service Portal / mobile view with UI Policies and a rules dashboard for admins.	Month 5–6	Better user experience and easier rule management.
