

Coding & Solution

Date: 01 October 2026

Team ID : 6ab22737f32d8c9d8b225a8a

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 5 Marks

Coding & Solution:

This section evaluates the quality and completeness of the implemented Flow Designer solution. The submission should demonstrate working automation, clean flow design, proper configuration, and alignment with the defined requirements.

Instructions:

1. Ensure the Flow Designer flow is well-structured, clearly named, documented, and follows best practices.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all required flows, subflows, actions, configurations, and setup information needed to run the solution.
4. Attach or link to the project repository or relevant hosted project location in the table below, if applicable.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Technology	ServiceNow Flow Designer
Programming Language(s)	Flow Designer configuration / JavaScript if required
Framework(s) Used	ServiceNow Flow Designer
Key Features Implemented	Flow trigger, conditions, actions, data handling, automation, notifications, and error handling
Pending / Incomplete Features	
Setup / Run Instructions	Configure the required ServiceNow application, create/activate the Flow Designer flow, provide required data, and test the workflow.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)	Remarks
1	Flow is modular and organized into appropriate flows, subflows, and actions		
2	Meaningful flow, variable, action, and data element names are used		
3	Flow descriptions / documentation are included where necessary		
4	Error handling is implemented for critical flow operations		
5	The Flow Designer automation runs without critical errors		
6	The flow configuration is saved and maintained in the project/version control process where applicable		

Additional Notes / Comments:
